

ClaimVector™ for workers' compensation

AI-Powered claims benchmarking for brokers

ClaimVector is grounded in real claims data – not abstract market averages – and built for repeatable decision-making, providing a significant enhancement to existing claims analytics capabilities.

Transforms limited claims information into actionable insights

- Evaluate portfolio performance relative to peers
- Identify risk drivers and improvement opportunities
- Standardized year-over-year trend logic

Are you ready to move beyond static reporting?

ClaimVector is designed to support superior, data-backed insights for brokers for enhanced claims advocacy. Benchmarking insights are aligned by industry, geography, claim maturity, and outcomes.

What sets ClaimVector apart from the competition:

- Applies deep Workers' Comp expertise to real broker workflows, turning experience into practical decision support.
- Delivers transparent, explainable benchmarks brokers can confidently stand behind.
- Built into repeatable workflows, with value compounding as data history and adoption grow.
- Supports strong claims stewardship while enabling responsible decisions that improve outcomes for injured workers.
