

ClaimVoyant™

A new standard in AI driving
actionable triage from day one

ClaimVoyant flags high-risk claims at First Notice of Loss (FNOL) that are likely to be more severe, complex, and involve delayed recovery for Workers' Comp Carriers, TPA's, Self-Insured Employers, PEOs and Broker-Consultants. Using minimal data, ClaimVoyant assesses claim complexity, enabling appropriate staff assignment and care management.

Address some of the biggest concerns in the workers' comp industry

- Boost your ability to control complex/high-dollar claims
- Enhance management of patient chronic conditions/comorbidities
- Increase support for front-line claims decisions and efficiencies

ClaimVoyant represents a FNOL solution in the broader suite of Gradient AI's predictive analytics management. ClaimVoyant features a **90%+ claimant match rate**, offering a signal of relative complexity and delayed recovery, and with a signed medical authorization from the claimant, a report that provides **early identification of complicating factors**, enabling proactive treatment trajectory management.

What sets ClaimVoyant apart from the competition

- Leverages Gradient AI's deep Workers' Comp expertise in a lightweight, immediately usable format
- Provides a clear recommendation, empowering adjusters to act on confidently at FNOL.
- Enables adjusters and clinical resources to identify and respond to underlying drivers of complexity, severity, and delayed recovery.
- Integrates via portal, API, CSV, or core systems; fits existing workflows without disruption.
- Supports cost containment and timely intervention for injured workers with earlier identification of at-risk claims.
