

Workers' comp solutions for claims management

Makes complex risk clear, usable and aligned
across stakeholders

Gradient AI's Workers' Comp Claims Management Solution is grounded in real claims data — not abstract averages — and built for repeatable decision-making, enhancing how claims teams evaluate, triage, and resolve cases without disrupting existing workflows.

What if AI could help you get a more complete picture of every claim, predict which ones are at risk of escalation, surface the best course of action, and identify the providers most likely to drive positive outcomes?

Now that's game changing!

Transforms limited claims information into actionable insights

- Pinpoint high-risk claims early, before they escalate in cost or complexity
- Identify the drivers of claim severity so resources can be directed where they matter most
- Enable data-backed decisions that improve outcomes for injured workers and your organization

Are you ready to move beyond reactive claims management?

Gradient AI's Workers' Comp Claims Management Solution is designed to support superior, data-backed insights for enhanced claims advocacy. Insights are aligned by **injury type, geography, claim maturity, and outcomes**, giving your teams a richer, more accurate picture at every stage of the claim lifecycle.

What sets Gradient AI's claims solutions apart from the competition:

- Applies deep Workers' Comp expertise to real claims workflows, **turning experience into practical decision support.**
- Delivers **transparent, explainable signals** that reduce reliance on intuition or black-box outputs, so claims teams can act with confidence.
- **Alerts adjusters and nurses to risks** within daily workflows, reducing manual triage and improving claim segmentation and return-to-work strategies.
- Integrates via portal, API, or core systems as it **fits existing workflows without disruption and with minimal IT friction.**
- **Supports the dual mandate:** stronger financial outcomes and better experiences for injured workers.
